

Bugs fixed from version 4.4.0

Version 4.4.7

- Changed thread initialization model to work better on Windows Vista.
- Fixed 3D button visibility.
- Added possibility to load custom product definitions.
- Changed call sign attribute for AIS targets to callsg for compliance.
- Added support for UKHO WTPO and WDAO overlays.
- Allowed objects with annotations to be shown in pick report (previously only the annotations were shown).
- Fixed annotations being listed multiple times.
- Added separate default product filter configuration files for master and navy versions.

Version 4.4.8

- Path last used to install GeoTIFF charts is now saved.
- Fixed past track sometimes not being updating until moving or zooming the chart.
- Fixed waypoint import not importing tab separated waypoint lists or lists without waypoint names.
- Fixed chart annotation text files containing characters from other languages than English not being displayed correctly.
- Fixed possible lockup bug for mouse crosshair or graticule when pole in view.
- Fixed AIS filtering to allow filtering subitems
- Fixed AIS information loss detection
- AIS position quality information now also indicates when the AIS own ship position is estimated (dead reckoning) or manually entered.
- Fixed display of Inland ENC's and added support for pENC's and UKHO-AIO overlays.
- Setup now supplies the ChartHandler with a neighbouring default path.
