

# TMS CHARTSERVER

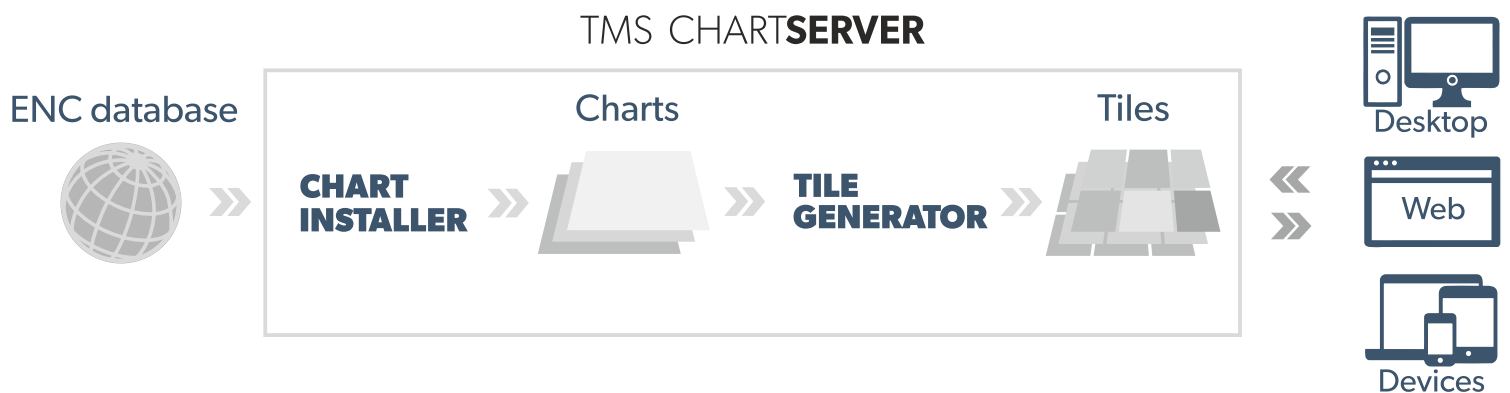

## PRODUCT DESCRIPTION

TMS ChartServer is a professional high performance server application for maritime web based or mobile applications like vessel tracking, fleet monitoring or surveillance systems. TMS ChartServer provides pre-rendered charts based on the principles of the Tile Map Service (TMS) specification and OpenStreetMap/Google tiling schemes (XYZ).

Besides the server application itself the TMS ChartServer package comes with desktop applications for tile generation and chart installation.

## PRODUCT HIGHLIGHTS

- High performance tile server
- Import & display of S-57 / S-63 charts
- Quick setup
- Easy configuration of chart settings
- Also available as hosting service
- Works with OpenLayers® or Leaflet®
- Free test license

## ADDITIONAL SERVICES

SevenCs also provides TMS ChartServer as a hosted service with charts of your choice.
